## **DETAILED ACTION**

Page 2

## Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to a head cap and an apparatus using the head cap, classified in class 347, subclass 31.
- II. Claims 10 and 15-16, drawn to a method of manufacturing an LCD, classified in class 427, subclass 258.
- III. Claims 11 and 17-19, drawn to a method of manufacturing an EL device, classified in class 427, subclass 66.
- IV. Claim 12, drawn to a method of an electron emission device, classified in class 427, subclass 77.
- V. Claim 13, drawn to a method of manufacturing a PDP device, classified in class 427, subclass 68.
- VI. Claim 15, drawn to a method of manufacturing an electrophoretic display, classified in class 427, subclass 64.
- VII. Claim 20, drawn to a method of forming a spacer, classified in class 427, subclass 284.
- VIII. Claim 21, drawn to a method of forming metallic wiring, classified in class 427, subclass 96.1.
- IX. Claim 22, drawn to a method of forming a lens, classified in class 427, subclass 162.
- X. Claim 23, drawn to a method of forming a resist, classified in class 427, subclass 256.
- XI. Claim 24, drawn to a method of forming a light diffusion body, classified in class 427, subclass 279.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II-XI are directed to related processes. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of

Application/Control Number: 10/647,893 Page 3

Art Unit: 1762

operation, function, or effect. See MPEP § 806.05(j). In the instant case, inventions II-XI have different modes of operation. Each invention requires a different material to be deposited on a different type of substrate.

- 3. Inventions I and II-XI are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case invention I can be used to deposit any one of inventions II-XI.
- 4. Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
- 5. Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.
- 6. Due to the complexity of the restriction, a phone call was not made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Art Unit: 1762

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jimmy Lin whose telephone number is 571-272-8902. The examiner can normally be reached on Monday thru Thursday 8 - 5:30 and Friday 8 - 4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tim Meeks can be reached on 571-272-1423. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
